

Kommentar från Danske Bank

“Danske Bank is aware of and concerned about the deforestation rate of the Amazon, the Cerrado and other rainforests around the globe. We have continuous dialogue with our customers about sustainability considerations and for customers with complex, global supply chains, we expect them to manage relevant risks including deforestation.

Sustainability risks are also considered in our investment decisions. We have for some time closely monitored companies exposed to deforestation issues to identify high-risk cases and take appropriate action. As of May 2021, we maintain investment restrictions for 18 companies due to deforestation and 43 companies for biodiversity impacts.”
